GUARDIAN

RCC-12

Reciprocating Compressor Controller for coldstores and supermarkets

- **Suction pressure setpoint control of up 8 uneven/even compressors**
- **Compressor monitor with capacity, pressure & hours run displays**
- **Alarm, trip & load monitoring**
- **Local panel operation & setup of timers, limits and configuration**
- **Remote RS485 monitoring and setup**

Operation and Setup Manual

The GUARDIAN RCC-12 Reciprocating Compressor Controller provides suction pressure setpoint control and alarm monitoring for up to 8 even or uneven size compressors.

The controller communicates with the GUARDIAN Autograph Terminal and the Woodley System 5 which provide remote central alarm monitoring, data recording and graphs.

Local temperature displays and modification of all defrost times, alarm and control settings is available when the unit is connected to the optional GUARDIAN SKD-9 Keyswitch display.

CONTENTS

Getting Started

Guardian Controllers provide refrigeration engineers with

- **ULTIMATE FLEXIBILITY**
- **ASSURED MONITORING**
- **RELIABLE ALARMS**

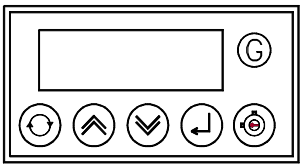
This manual provides refrigeration designers, installers, service mechanics and supermarket personnel with the necessary information to achieve the above objectives.

All users require to know a few basic facts about this controller before successfully starting to perform their design, commissioning, maintenance or operating functions.

a) All GUARDIAN controllers need to be set up with a unit model selection and other basic settings for setpoints, timers and addresses. All these settings need to be done using the SKD.9 Keyswitch Display, so the understanding of the button operation of this unit is essential.
b) The shorthand used in the following chapters for concisely expressing button pressing and selection sequences to do all this setup needs to be understood.
c) Mains power input voltage and hardware switch and link option selections (if any are required) must correspond to the selected unit model configuration.
d) Since each controller can be configured in a number of different ways to perform flexible refrigeration control then an understanding of how to find out what unit model is currently selected, what it does and how it is connected, is also necessary.

SKD.9 KEYSWITCH DISPLAY OPERATION

GUARDIAN controllers require a SKD.9 Keyswitch Display unit to be plugged into the telephone jack socket in the controller before any settings can be changed.
The SKD.9 is connected to the GUARDIAN controller via a 6-core telephone cable.
The SKD.9 Keyswitch/Display comprises a plastic enclosure housing a PCB with four membrane pushbuttons, four LED displays and a 2-position Keyswitch.



SKD.9 buttons have the following functions when pressed:

@	**'next' button**	displays next value or menu selection in sequence.
/	**'raise' button**	raises a menu settings value or menu item selection.
<	**'lower' button**	decreases a menu settings value or item selection.
?	**'accept' or 'enter' button**	accepts any alarm and is used for entering a menu selection or settings value data entry

The two position **keyswitch** may be used to toggle display case control status from OFF to FANS only and back to AUTO
The Keyswitch is not used on the RCC-12.

BUTTON OPERATION SHORTHAND

To assist in easy setup of control setpoints, delays, timers and other configuration settings, the sequence of button presses and subsequent displays will be shown in this handbook as below:

ii) A button symbol means press that button
iii) A display box shows the result of the last button press on the SKD.9 display.

EXAMPLES

@ Auto @ OFF= ? -OFF is shorthand for

Press **'next'** button which then displays AUTO
Press **'next'** button which then displays OFF
Then press **'enter'** button which changes the control mode to OFF and displays -OFF

@:@ Auto ?

Press **'next'** repeatedly until **Auto** is displayed then press **'enter'.**

Suct 4.8b

means the display alternates between the value identifier tag and the latest value.

DiSc =Oc= FAIL

means the display alternately flashes between the value identifier tag (discharge temperature), the measured value (open circuit) and the alarm or trip message.

HARDWARE CONFIGURATION CHECKS

Prior to switching on the GUARDIAN controller check that the hardware unit is the correct type for the incoming mains voltage

Models with **BLUE** labels and suffix '**L' (LOW VOLTAGE)** operate at **24vac**
Models with **BLACK** labels and no suffix **(NORMAL 230vac)** operate at **230vac**
230vac MAINS SUPPLY WILL DAMAGE A BLUE LABEL CONTROLLER !!!
A BLACK label controller will not work with a 24vac supply

When satisfied that the correct type of controller is available then the following checks should be made prior to controller installation or replacement

a) Ensure mains supply is wired correctly to the appropriate TERMINAL WIRING drawing for the model selected.
b) Ensure that any transducer selector switches specified on the TERMINAL WIRING diagram are in the correct state.
c) Ensure any shorting link selector pins specified on the TERMINAL WIRING diagram are correctly fitted.
d) Ensure that probes are wired to the terminal WIRING DIAGRAM and the correct type of thermistor or pressure transducer probes are fitted.
e) The SKD.9 Keypad/display unit is fitted correctly in its 6 way telephone socket.
f) The RS485 highway connections (if required) are wired to the correct terminals and the screen drain wire is continuous to earth.

CONFIGURE UNIT MODEL, SYSTEM No & ADDRESS

Enter Passcode PP05 for normal changes

Before any permanent change of controller settings are made then the correct entry of the appropriate passcode is necessary.
Most normal system settings require entry of passcode PP05

@:@	SEt=	?	PP00	@:@	PP05	?

Press **'next'** repeatedly until **SEt** is displayed then press **'enter'**. **PP00** is displayed.
Press **'raise'** repeatedly until **PP05** is displayed and then press **'enter'.**

Select Unit Model

@:@	SEt=	?	PP00	/:/	PP05	?

Enter Passcode PP05 as button sequence above

@:@	Unit	?	8PAC	/:/	6PAC	?	6PAC

Press **'next'** repeatedly until **Unit** is displayed and then press **'enter'**
Display shows unit model currently selected which may be wrong.
Press **'raise'** repeatedly until correct model is displayed (e.g. 6PAC) and then press **'enter'** which causes the display to wink briefly and display the new unit model selection (e.g 6PAC)

Select System No and Address

e.g. setup unit for system 60 case 1 at address 180

Enter Passcode as button sequence as above

@:@	Unit					
@:@	Sn01	/:/	Sn60	?	Sn60	
@	Cn01	?	Cn01			
@	A001	/:/	A180		A180	
@:@	End=	?	=-26			

RS485 Communications

When the correct system number, case/compressor number and highway address have been entered as above then the controller can communicate with the GUARDIAN AutoGraph Terminal PC for central alarm monitoring and temperature display. Control setpoints, defrost times and alarm limits may then be sent to the controller from the PC rather than using the SKD9 Keyswitch display. For further details see page 22

UNIT MODELS

Guardian controllers may be configured in a number of different ways dependent on unit model selection. Each unit model fulfils a different refrigeration temperature monitoring and control requirement. In order to perform the required refrigeration control then each model has different uses for the controller's input output signals. This section gives details of all the model variations available for the controller and the way to connect the wiring to the plant devices and measuring transducers.

Available unit models (RCC-12)

RCC-12 '6PAC' Compressor Control
RCC-12 '8PAC' Compressor Control

GENERAL SPECIFICATION

Power 110 / 230 Vac 50 Hz 10VA
Operation 0 to 55ºC
Approx. dimensions Width 70 x length 100 x height off rail 110mm.

The RCC-12 controller is housed in a DIN rail mounting enclosure with 20 screw clamp connectors.

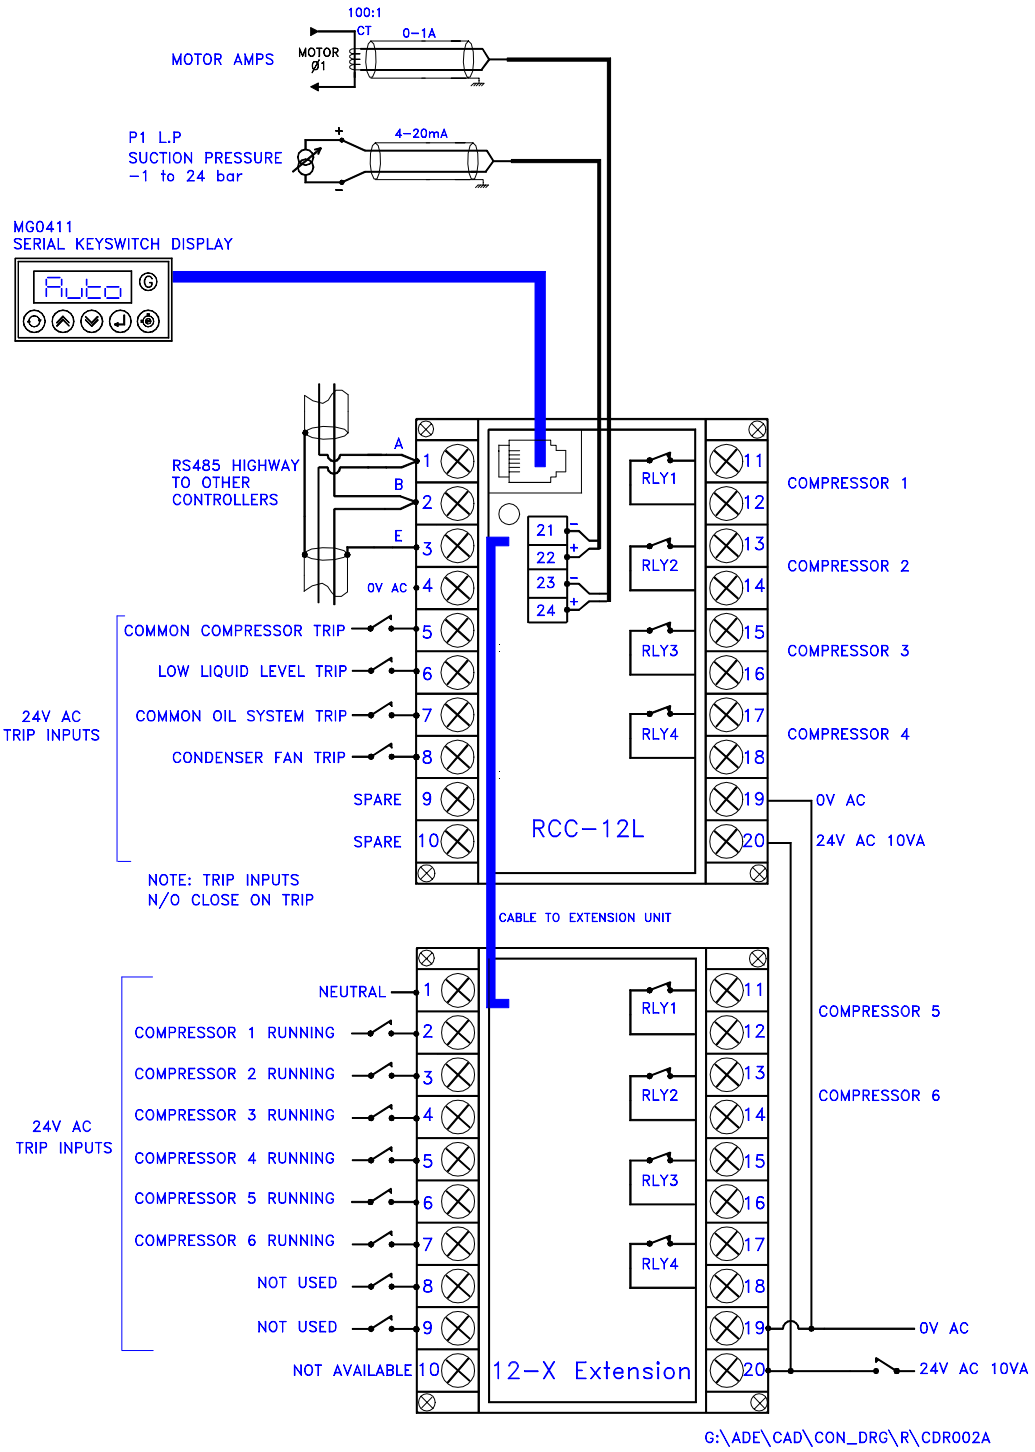
RCC-12 '6PAC' and '8PAC' Input/Output Signals

6PAC	8PAC		
Analogue Inputs			
Motor Amps	Motor Amps	Motor 01	0-1 amp
P1	P1	Suction Pressure	4 to 20ma 1 to 24 bar g
Digital Inputs 230 /24 Vac			
Trip 1	Trip 1	Any Compressor trip	
Trip 2	Trip 2	Liquid Alarm Level	
Trip 3	Trip 3	Oil Level Alarm	
Trip 4	Trip 4	Condenser Fan Trip	
Trip 5	Trip 5	Spare	
Trip 6	Trip 6	Spare	
Relay Outputs (5 amp 230 /24Vac) n/o with suppressers			
R1 to R4	R1 to R4	Compressor 1 to 4	

RCC.12 6PAC

RCC-12 Termination Wiring - '6PAC' model selection

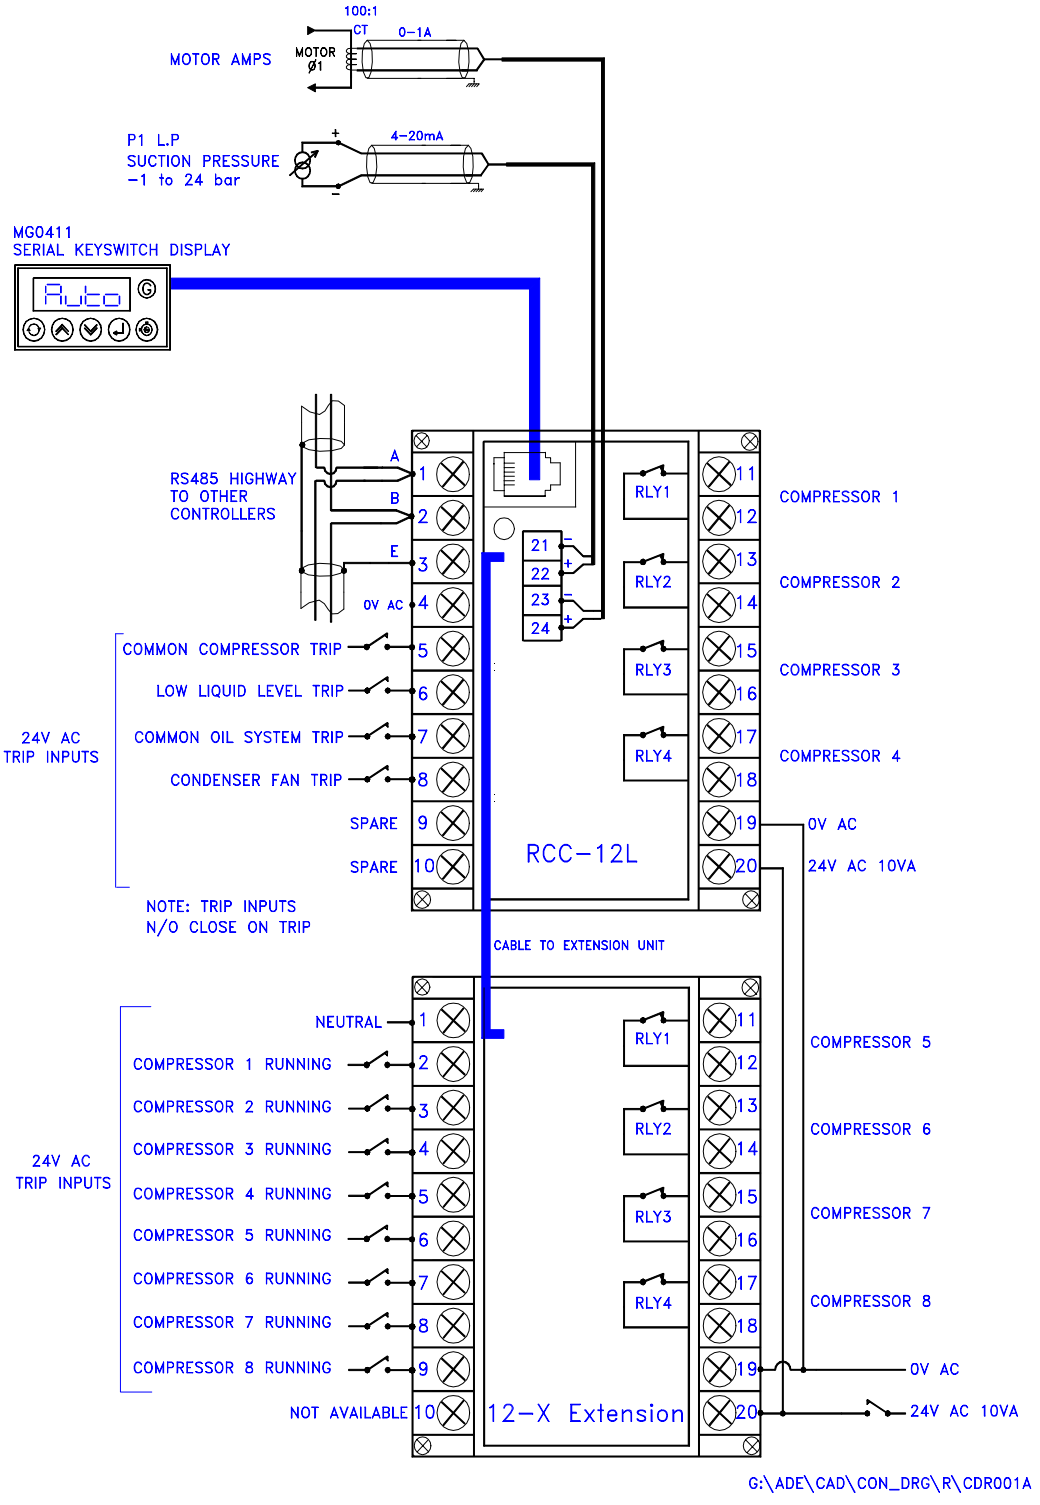
Compressor Control



RCC.12 8PAC

RCC-12 Termination Wiring - '8PAC' model selection

Compressor Control

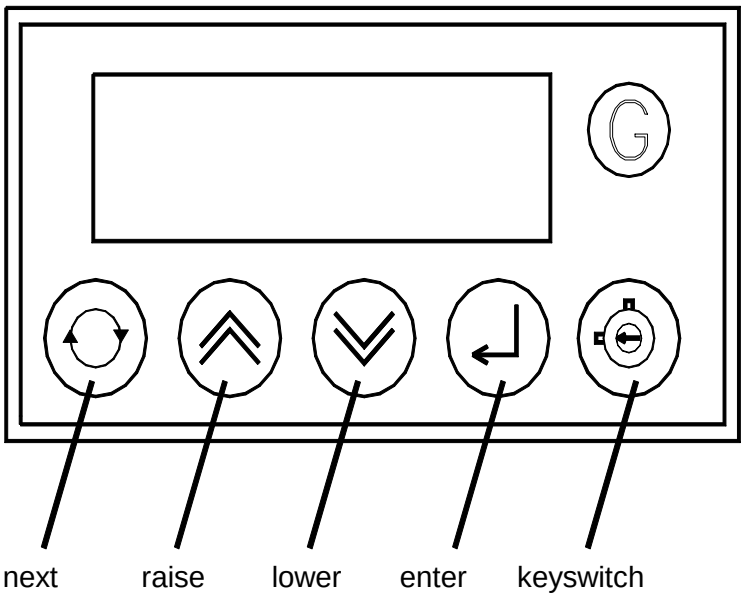


OPERATION

The SKD.9 Keyswitch display provides a display at the control panel of:

Compressor suction pressure
Condenser discharge pressure.

Display of other temperatures pressures etc by pressing 'next' @ button,
the values displayed depend on the unit model selected.
The keyswitch. Is not used on the RCC12
Passcode protected setup of controller setpoints, timers and limits.
Alarms and trips are reset by pressing accept



DISPLAY INDICATIONS

Compressor Displays

The following displays are available by repeatedly pressing @ Value displays are alternated with an identification Tag (ie 'Suct') which is displayed for a quarter time:-
All pressures are followed by ‘b’ to denote bar guage

Tag	Value	
Suct	=2.3b	Suction pressure (-1 to 24barG)
LoAd	=125	Total pack amps
CAP=	=100	Total Pack Capacity % (0 to 100 %) (capacity raise/lower operative in HAnd control mode)
S-uP	=3.5	Stage up timer count
S-dn	=0.3	Stage down timer count
	Auto	Pack Auto control mode (press 'accept')
	OFF=	Pack OFF control mode (press 'accept')
	hAnd	HANd control mode (press 'accept') (enables raise/lower buttons)
CPrS	1=11	Compressor motors run output on
deLy	=1==	Compressor anti-short cycle delay timing
Crun	1=11	Compressor run signal received
triP	==11	Motor trip status
CSEt		Request compressor parameter change

COMPRESSOR SETTINGS MAY ALSO BE SELECTED BY PRESSING 'Raise' with 'Suct' on display

Default Displays

The default suction pressure display

Suct =2.3b	Suction pressure (-1 to 24barG)

is during AUTO or restart sometimes replaced by

8888	During restart
6PAC	Unit model configuration selected
u1.1A	(Software version)
-OFF	If unit selected OFF
HAnd	If unit selected hand control
=PC= FAiL	if RS485 comms watchdog fail

TRIPS AND ALARMS

COMPRESSOR SAFETY TRIPS

ALL Trips are RESET locally by pressing the 'enter' button.
The last safety trip input detected is automatically displayed with a flashing alternative **'triP'** message.

The **'next'** button may always be used to view other displays.

Trip messages displayed depend on the unit model and the configuration selected.

Analogue Trips

Suct =oc= FAIL	Suction pressure open circuit (6PAC or 8PAC)
Suct 10.5 triP	Suction pressure high trip

ALARMS

Analogue Alarms

If the suction pressure, amps liquid level or superheat values go outside the high or low alarm limits then the appropriate value is displayed with a flashing alternative '**Hi**' or **'Lo**' alarm message.

Suct -0.8 ==Lo	Suction Pressure Low alarm
Suct 10.8 Hi==	Suction Pressure High alarm
LoAd =120 Hi==	Motor Load High alarm - also unloads pack

Digital Alarms

Digital alarm messages include:-

Lo-A Leu=	Digital input Low level liquid alarm 30 min time delay
C-1 triP	Compressor 1 Tripped. The run input was not present for 3 successive starts.

PC-FAIL ALARM

If the RCC12 unit is in **'Auto'** mode and a valid status request has not been received for 60 seconds via the RS485 highway then a Watchdog timer **'PC/FAIL'** message is displayed.
This alarm is reset if 485 communications are restored or the AGT/SYS5/Locl/nonE is set to **'LocL'** or **'nonE'** in unit settings.

=PC= FAIL	if RS485 comms watchdog fail

MODE CHANGE Compressors

Pressing 'next' until the pack mode selections are on display and then pressing **'enter'** changes the pack mode to the new selection displayed.

Auto	AUTO pack control mode with compressor control on suction pressure
oFF=	-OFF = pack control stopped - (standby operation)
hAnd	hAnd = pack control in local manual operation

Pack Capacity Manual

With the pack mode selected to HANd, the pack capacity can be increased or decreased by pressing **'raise'** or **'lower'** buttons when the pack capacity is on display.

@:@ HAnd ?

@:@ CAP= ==50 /:/ ==75 ?

GLOBAL RS485 COMMANDS

IF all compressors are tripped or the unit is in **'OFF'** mode and Trip Settings are **'CoFF'** then a GLOBAL RS485 **'OFF'**command is sent to all case controllers on the same section of RS485 Highway to prevent liquid floodback.

A GLOBAL RS485 **'AUTO'** command is sent on **restart**, when trip **'reset'** is pressed or when control mode is selected **'AUTO'**.

A GLOBAL RS485 **TIME** synchronisation command is sent to all case controllers twice per day if **Agt/SYS5/Locl/nonE** protocol selected is **'LocL'**

USEFUL BUTTON SEQUENCES

The following button sequences should prove useful during normal service operation

Reset ALARM or TRIP

SETUP OPERATION

Setup operation lasts for a maximum of 5 minutes after being activated by pressing ? with CSEt or FSEt on the display panel.

On entry to Setup passcode PP00 is displayed.

To change any settings passcode PP05, PP09 or PP11 must be first selected using / and ? pushbuttons.

If the correct passcode is not entered then setup values may be displayed but any attempted changes are ignored.

Compressors	**Settings Level 2**	
CSEt	CSEt	Press ?
PP00	PP00	Set passcode PP05, PP09 or PP11 by using the / and < pushbuttons
PP05 ?	PP11	Press ?

COMMUNICATIONS

Communication facilities are available for interrogation of temperatures, status and modification / display of setpoints, limits and timeclock settings. All communication is via a daisy chain RS485 link which connects all GUARDIAN controllers units in series.

Communication commands and replies are checked for parity and block length and automatically re-transmit if errors are detected.

Each GUARDIAN controller has a unique unit number address UU/u which is used to select the appropriate unit for interrogation or modification.

UU is stub no. 1-80
u is case / coldstore number 1-3.
i.e. case 3 stub 56 has address 56/3
and coldstore stub 45 has address 45/1

Some communication commands may use 'wildcard' stub number 99 and 'wildcard' case number 9 to access all stubs on the highway or all cases in a stub.

GUARDIAN controllers are inactive until they are addressed.

When the organisation of commands on the RS485 highway is under the control of a Woodley Mk V then GUARDIAN units only accept status requests which transmit case, discharge and return air temperatures and defrost status.

GUARDIAN Autograph or RM-256 Refrigeration Monitor Communication commands available are:-

a) Transmit Unit Status — which replies with command plus stub status & case temperature

b) Transmit Values — which replies with stub address plus latest signed temperature values, time, trip states, relay states and internal status

c) Transmit Setpoints — which replies with setpoints and limits.
System Sn and unit Addresses Axxx may not be changed via the RS485 serial link

d) Receive setpoints with new setpoint values

e) Receive Time and Date with new hours and minutes, day, month and year for real time clock

f) Initiate/Terminate a hot gas or off-cycle defrost

g) ON auto / FANS only / case OFF selection for case cleaning
